

ANJU RANI

QA Engineer | Manual & Automation Testing | Agile/Scrum

+91-6284186275 | drbalveersingh85@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Results-driven QA Engineer with 1+ year of professional experience at Quark Software Inc., specialising in functional testing, regression testing, UI testing, API testing, cloud integration testing, and middleware testing within Agile/Scrum environments. Hands-on expertise across two enterprise products — Quark Layout (cloud-integrated layout design platform) and Infografix (AI-powered infographic design tool) — covering both manual and automation testing end-to-end. Proficient in Selenium WebDriver (Java), Python-based record-and-replay automation, API testing with Postman. Strong CGPA of 9.13 reflects a rigorous computer science foundation applied directly to quality assurance.

PROFESSIONAL EXPERIENCE

Software Engineer – QA | Quark Software Inc.

Jul 2025 – Apr 2026

Manual & Automation Testing

Product 1: Quark Layout — Cloud-Integrated Web Version of QuarkXpress

- Performed API testing using Postman to validate REST endpoints for cloud-integrated features, verifying request/response payloads, status codes, authentication flows, and error handling across multiple API versions.
- Executed cloud integration testing to validate seamless data synchronisation between the desktop application and cloud services, covering upload/download workflows, session persistence, and offline-to-online state transitions.
- Conducted middleware testing to verify the communication layer between the front-end application and backend services, ensuring correct data transformation, message routing, and error propagation.
- Executed functional testing across core layout features including layout rendering, text editing, typography, and formatting tools, ensuring every feature met acceptance criteria before sprint sign-off.
- Performed regression testing across sprint releases to verify that new changes did not break existing functionality, maintaining zero critical defects to production.
- Built a Python record-and-replay automation tool to capture and replay repetitive regression test scenarios, significantly reducing manual QA effort across sprint cycles.
- Tracked, documented, and managed defects end-to-end in Azure Boards, collaborating directly with developers to reproduce issues, verify root-cause fixes, and close bugs within sprint timelines.
- Acted as final quality gate before customer-facing deployments, validating new product features and bug fixes against acceptance criteria and release sign-off checklists.

Product 2: Infografix — AI-Powered Infographic Design Tool

- Executed comprehensive UI testing of the Infografix editor, validating infographics rendering, drag-and-drop interactions, real-time design updates, responsive behaviour, and cross-browser visual consistency.
- Performed ChatGPT plugin testing to validate AI-generated content suggestions, verifying response accuracy, plugin API integration, error handling for invalid prompts, and UI rendering of AI outputs within the design canvas.
- Developed Selenium WebDriver (Java) automated test scripts for browser-based UI regression testing, increasing automation coverage across critical Infografix user workflows including design creation, template loading, and export flows.
- Utilised the Python record-and-replay tool to automate repetitive UI interaction sequences in Infografix, enabling fast regression validation without manual re-execution.
- Executed functional testing across all Infografix features, validating data input, canvas interactions, asset management, user settings, and export/sharing flows against product requirements.
- Performed exploratory and edge-case testing to identify UI inconsistencies, broken states, and usability issues not covered by formal test cases.

- Logged, prioritised, and tracked all defects in Azure Boards with detailed reproduction steps, severity classifications, and supporting screenshots — ensuring efficient resolution within sprint cycles.

Software Engineer QA – Intern | Quark Software Inc.

Jan 2025 – Jun 2025

Manual And Automation QA | Defect Management | API Validation | Sprint Documentation

- Executed manual test cases across functional and regression test suites within Agile sprint cycles, documenting defects with clear reproduction steps and severity classifications in Azure Boards.
- Performed API validation using Postman, verifying REST endpoint responses and flagging discrepancies for developer review.
- Maintained structured QA documentation including test plans, test reports, and sprint sign-off checklists supporting release readiness reviews.
- Assisted developers in reproducing and diagnosing bugs, reducing average bug resolution time through effective communication and detailed defect reports.

KEY PROJECTS

Automation Test Case Recorder & Replay Tool |

Python ·

- Designed and built a desktop automation tool to record mouse clicks, keyboard inputs, and UI interactions, then replay them as automated test cases — directly reducing manual QA effort across regression cycles for both Quark Layout and Infografix products.
- Implemented Selenium WebDriver (Java) to automate browser-level UI interactions, enabling reliable cross-browser regression test execution.
- Implemented screenshot capture and timestamped logging to support debugging and test failure analysis.
- Developed a Tkinter-based GUI enabling non-technical team members to manage and execute recordings without any scripting knowledge.

TECHNICAL SKILLS

Testing: Manual, Functional, Regression, UI, API, Cloud Integration, Middleware, ChatGPT Plugin Testing

Automation: Selenium WebDriver (Java), Python (PyAutoGUI), Tkinter, Record & Replay Scripting

API Testing: Postman, REST API Validation, Endpoint & Payload Verification

Cloud & Integration: Cloud Integration Testing, Middleware Testing, Data Sync Validation

AI/Plugin Testing: ChatGPT Plugin Testing, AI Content Validation, Prompt-Response Verification

Bug Tracking: Azure Boards, Defect Lifecycle Management, Severity Classification

Methodology: Agile, Scrum, Sprint Planning, Release Sign-off, Test Case Design, Test Documentation

Tools: Git, GitHub, QA Reporting, Azure DevOps

Languages: Java, Python

EDUCATION

B.Tech — Computer Science (CGPA: 9.13 / 10.0) |
Punjabi University Patiala

2021 – 2025

Senior secondary— 12th (Marks :474/500 | 94.8 %) |
Meritorious School Patiala

2021

Matriculation— 10th (Marks :621/650 | 95.53 %) |
Senior Secondary School Kahangarh

2019
